Framework for Essential Instructional Behavior (Draft 14) .................. 17

Modifications will be made to accommodate IEP mandates for classified students.
STATEMENT OF PURPOSE

The philosophy of HSPA 11 LAL stems from the premise that reading and writing are developmentally natural processes. The purpose of these courses is to provide a nurturing environment wherein all students will improve their test taking skill by mastering strategies to understand meaning and to construct meaning in written text.

The classroom environment will be one that is considerate of student interests and individual needs. It will be small-sized, structured, and focused on the demands of the HSPA 11. Because the overall objective of this course is to encourage the development of reading comprehension and writing focus and fluency, students will be given the frequent opportunities to read and write in both the narrative and persuasive modes. Students will experience growth and empowerment as they master the skills needed for this basic communication in English.
Introduction

The most precious resource teachers have is time. Regardless of how much time a course is scheduled for, it is never enough to accomplish all that one would like. Therefore, it is imperative that teachers utilize the time they have wisely in order to maximize the potential for all students to achieve the desired learning.

High quality educational programs are characterized by clearly stated goals for student learning, teachers who are well-informed and skilled in enabling students to reach those goals, program designs that allow for continuous growth over the span of years of instruction, and ways of measuring whether students are achieving program goals.

The Edison Township School District Curriculum Template

The Edison Township School District has embraced the backward-design model as the foundation for all curriculum development for the educational program. When reviewing curriculum documents and the Edison Township curriculum template, aspects of the backward-design model will be found in the stated enduring understandings/essential questions, unit assessments, and instructional activities. Familiarization with backward-design is critical to working effectively with Edison’s curriculum guides.

Guiding Principles: What is Backward Design? What is Understanding by Design?

“Backward design” is an increasingly common approach to planning curriculum and instruction. As its name implies, “backward design” is based on defining clear goals, providing acceptable evidence of having achieved those goals, and then working ‘backward’ to identify what actions need to be taken that will ensure that the gap between the current status and the desired status is closed.

Building on the concept of backward design, Grant Wiggins and Jay McTighe (2005) have developed a structured approach to planning programs, curriculum, and instructional units. Their model asks educators to state goals; identify deep understandings, pose essential questions, and specify clear evidence that goals, understandings, and core learning have been achieved.

Program based on backward design use desired results to drive decisions. With this design, there are questions to consider, such as: What should students understand, know, and be able to do? What does it look like to meet those goals? What kind of program will result in the outcomes stated? How will we know students have achieved that result? What other kinds of evidence will tell us that we have a quality program? These questions apply regardless of whether they are goals in program planning or classroom instruction.

The backward design process involves three interrelated stages for developing an entire curriculum or a single unit of instruction. The relationship from planning to curriculum design, development, and implementation hinges upon the integration of the following three stages.
**Stage I: Identifying Desired Results:** Enduring understandings, essential questions, knowledge and skills need to be woven into curriculum publications, documents, standards, and scope and sequence materials. Enduring understandings identify the “big ideas” that students will grapple with during the course of the unit. Essential questions provide a unifying focus for the unit and students should be able to answer more deeply and fully these questions as they proceed through the unit. Knowledge and skills are the “stuff” upon which the understandings are built.

**Stage II: Determining Acceptable Evidence:** Varied types of evidence are specified to ensure that students demonstrate attainment of desired results. While discrete knowledge assessments (e.g.: multiple choice, fill-in-the-blank, short answer, etc…) will be utilized during an instructional unit, the overall unit assessment is performance-based and asks students to demonstrate that they have mastered the desired understandings. These culminating (summative) assessments are authentic tasks that students would likely encounter in the real-world after they leave school. They allow students to demonstrate all that they have learned and can do. To demonstrate their understandings students can explain, interpret, apply, provide critical and insightful points of view, show empathy and/or evidence self-knowledge. Models of student performance and clearly defined criteria (i.e.: rubrics) are provided to all students in advance of starting work on the unit task.

**Stage III: Designing Learning Activities:** Instructional tasks, activities, and experiences are aligned with stages one and two so that the desired results are obtained based on the identified evidence or assessment tasks. Instructional activities and strategies are considered only once stages one and two have been clearly explicated. Therefore, congruence among all three stages can be ensured and teachers can make wise instructional choices.

At the curricular level, these three stages are best realized as a fusion of research, best practices, shared and sustained inquiry, consensus building, and initiative that involves all stakeholders. In this design, administrators are instructional leaders who enable the alignment between the curriculum and other key initiatives in their district or schools. These leaders demonstrate a clear purpose and direction for the curriculum within their school or district by providing support for implementation, opportunities for revision through sustained and consistent professional development, initiating action research activities, and collecting and evaluating materials to ensure alignment with the desired results. Intrinsic to the success of curriculum is to show how it aligns with the overarching goals of the district, how the document relates to district, state, or national standards, what a high quality educational program looks like, and what excellent teaching and learning looks like. Within education, success of the educational program is realized through this blend of commitment and organizational direction.
**Enduring Understanding:** All students will read and comprehend complex literary and informational texts independently and proficiently.

<tr>
<td>- How does a speaker communicate so others will listen and understand the message?</td>
<td>- A speaker selects a form and organizational pattern based on the audience and purpose.</td>
</tr>
</tbody>
</table>
### Standard 3.4 Speaking and Listening
All students will listen actively to information from a variety of situations.

**Big Idea:** Listening is an active process to gain understanding.

<table>
<thead>
<tr>
<th>Essential Questions</th>
<th>Enduring Understandings</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Strand A. Active Listening</strong></td>
<td></td>
</tr>
<tr>
<td>• Can one hear but not listen?</td>
<td>• Listening is the process of receiving, constructing meaning from, and responding to spoken and nonverbal messages.</td>
</tr>
</tbody>
</table>

| **Strand B. Listening Comprehension** |  |
| • How does a listener understand a message | • Effective listeners are able to interpret and evaluate increasingly complex messages. |

### Standard 3.5 Viewing and Media Literacy
All students will access, view, evaluate, and respond to print, nonprint, and electronic texts and resources.

**Big Idea:** A media literate person can evaluate how words, images, and sounds influence a message.

<tbody>
<tr>
<td><strong>Strand A. Constructional Meaning</strong></td>
<td></td>
</tr>
<tr>
<td>• What’s the media message?</td>
<td>• People experience the same media message differently.</td>
</tr>
</tbody>
</table>

| **Strand B. Visual and Verbal Messages** |  |
| • What values, lifestyles, and points of view are represented in, or omitted from media messages? | • Media have embedded values and points of views. |

| **Strand C. Living with Media** |  |
| • What affects media choice? | • Media choice is affected by personal experience and sense of need. |
Essential Instructional Behaviors

Edison’s Essential Instructional Behaviors are a collaboratively developed statement of effective teaching from pre-school through Grade 12. This statement of instructional expectations is intended as a framework and overall guide for teachers, supervisors, and administrators; its use as an observation checklist is inappropriate.

1. Planning which Sets the Stage for Learning and Assessment

   *Does the planning show evidence of:*
   a. units and lessons directly related to learner needs, the written curriculum, the New Jersey Core Content Curriculum Standards (NJCCCS), and the Cumulative Progress Indicators (CPI)?
   b. measurable objectives that are based on diagnosis of learner needs and readiness levels and reflective of the written curriculum, the NJCCCS, and the CPI?
   c. lesson design sequenced to make meaningful connections to overarching concepts and essential questions?
   d. provision for effective use of available materials, technology and outside resources?
   e. accurate knowledge of subject matter?
   f. multiple means of formative and summative assessment, including performance assessment, that are authentic in nature and realistically measure learner understanding?
   g. differentiation of instructional content, processes and/or products reflecting differences in learner interests, readiness levels, and learning styles?
   h. provision for classroom furniture and physical resources to be arranged in a way that supports student interaction, lesson objectives, and learning activities?

2. Observed Learner Behavior that Leads to Student Achievement

   *Does the lesson show evidence of:*
   a. learners actively engaged throughout the lesson in on-task learning activities?
   b. learners engaged in authentic learning activities that support reading such as read alouds, guided reading, and independent reading utilizing active reading strategies to deepen comprehension (for example inferencing, predicting, analyzing, and critiquing)?
   c. learners engaged in authentic learning activities that promote writing such as journals, learning logs, creative pieces, letters, charts, notes, graphic organizers and research reports that connect to and extend learning in the content area?
   d. learners engaged in authentic learning activities that promote listening, speaking, viewing skills and strategies to understand and interpret audio and visual media?
   e. learners engaged in a variety of grouping strategies including individual conferences with the teacher, learning partners, cooperative learning structures, and whole-class discussion?
   f. learners actively processing the lesson content through closure activities throughout the lesson?
   g. learners connecting lesson content to their prior knowledge, interests, and personal lives?
   h. learners demonstrating increasingly complex levels of understanding as evidenced through their growing perspective, empathy, and self-knowledge as they relate to the academic content?
   i. learners developing their own voice and increasing independence and responsibility for their learning?
   j. learners receiving appropriate modifications and accommodations to support their learning?
3. Reflective Teaching which Informs Instruction and Lesson Design

*Does the instruction show evidence of:*

a. differentiation to meet the needs of all learners, including those with Individualized Education Plans?

b. modification of content, strategies, materials and assessment based on the interest and immediate needs of students during the lesson?

c. formative assessment of the learning before, during, and after the lesson, to provide timely feedback to learners and adjust instruction accordingly?

d. the use of formative assessment by both teacher and student to make decisions about what actions to take to promote further learning?

e. use of strategies for concept building including inductive learning, discovery-learning and inquiry activities?

f. use of prior knowledge to build background information through such strategies as anticipatory set, K-W-L, and prediction brainstorms?

g. deliberate teacher modeling of effective thinking and learning strategies during the lesson?

h. understanding of current research on how the brain takes in and processes information and how that information can be used to enhance instruction?

i. awareness of the preferred informational processing strategies of learners who are technologically sophisticated and the use of appropriate strategies to engage them and assist their learning?

j. activities that address the visual, auditory, and kinesthetic learning modalities of learners?

k. use of questioning strategies that promote discussion, problem solving, and higher levels of thinking?

l. use of graphic organizers and hands-on manipulatives?

m. creation of an environment which is learner-centered, content rich, and reflective of learner efforts in which children feel free to take risks and learn by trial and error?

n. development of a climate of mutual respect in the classroom, one that is considerate of and addresses differences in culture, race, gender, and readiness levels?

o. transmission of proactive rules and routines which students have internalized and effective use of relationship-preserving desists when students break rules or fail to follow procedures?

4. Responsibilities and Characteristics which Help Define the Profession

*Does the teacher show evidence of:*

a. continuing the pursuit of knowledge of subject matter and current research on effective practices in teaching and learning, particularly as they tie into changes in culture and technology?

b. maintaining accurate records and completing forms/reports in a timely manner?

c. communicating with parents about their child’s progress and the instructional process?

d. treating learners with care, fairness, and respect?

e. working collaboratively and cooperatively with colleagues and other school personnel?

f. presenting a professional demeanor?
